

West Nile Virus Forecasts – October 2023

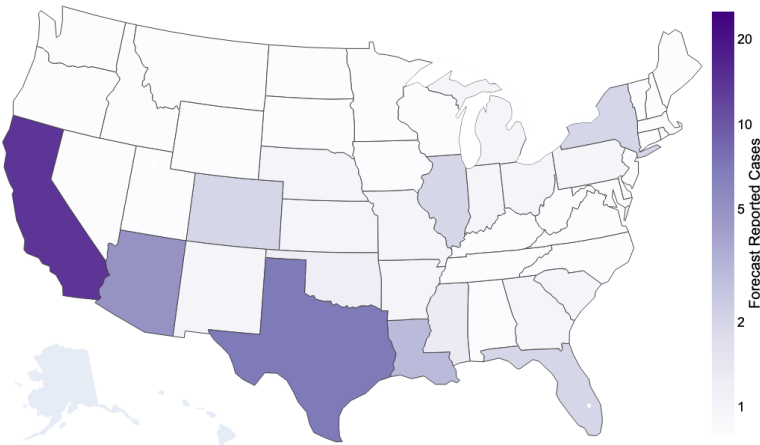

In April 2023, 10 teams submitted 12 forecasts for the monthly number of West Nile Neuroinvasive Disease (WNND) cases for each contiguous US state for May-December 2023. For the most recent submission deadline of September 30, 2023, 5 updated forecasts were submitted. We created an ensemble forecast using the most recent submission for each forecast model and a baseline forecast using only historical WNND data.

Summary points for the ensemble forecast:

- Incidence of WNND is forecast to decrease from October onward in all states, with the highest October forecasts and uncertainty in Arizona, California, and Texas.
- October WNND caseload is forecast to be zero or one for 40 states and the District of Columbia.
- The number of WNND cases in October is likely to be below the 10-year October median for 46 states and the District of Columbia, above the median for 0 states, and equally likely to be below or above the median for 3 states.

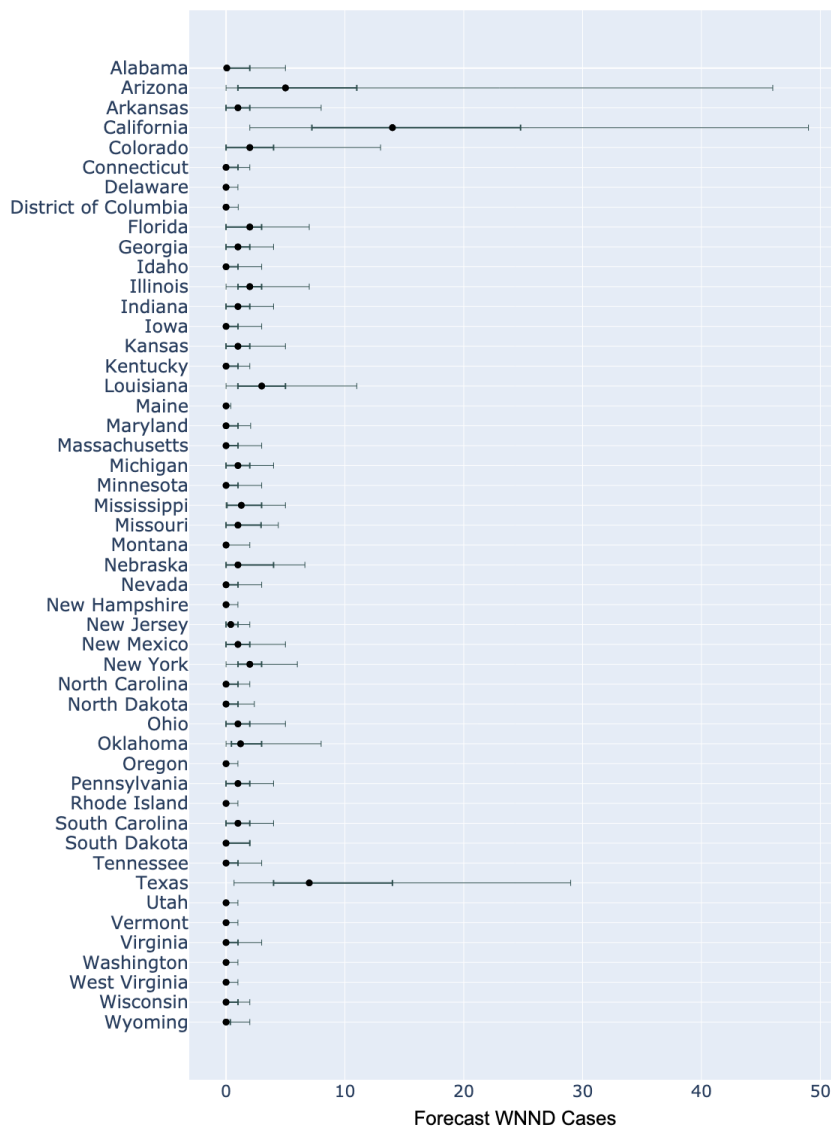

October Ensemble Forecast

October Ensemble Forecast of WNND Cases

This map shows the ensemble forecast for October. Uncertainty for each state forecast is shown below.

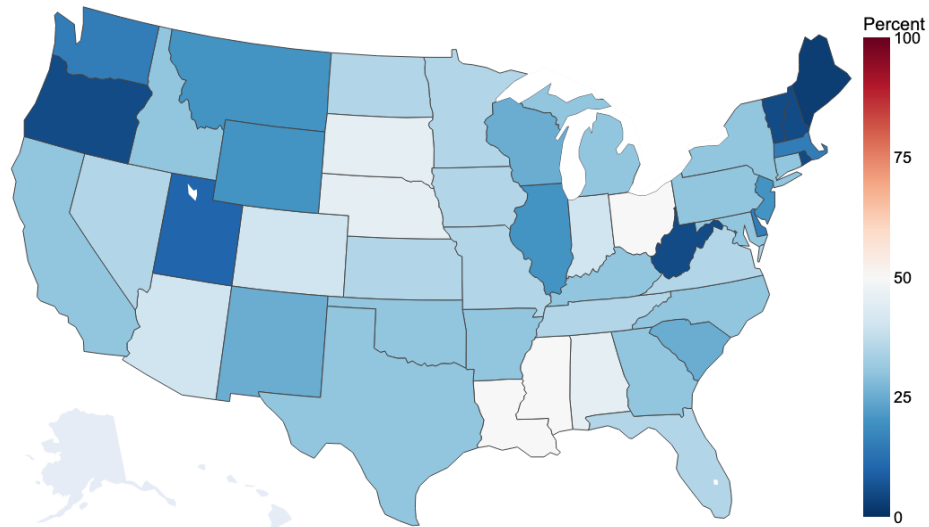

October Ensemble Forecasts

This figure shows state-level ensemble forecasts for October. Points represent the median forecasts with thick and thin lines representing the 50% and 90% prediction intervals, respectively.

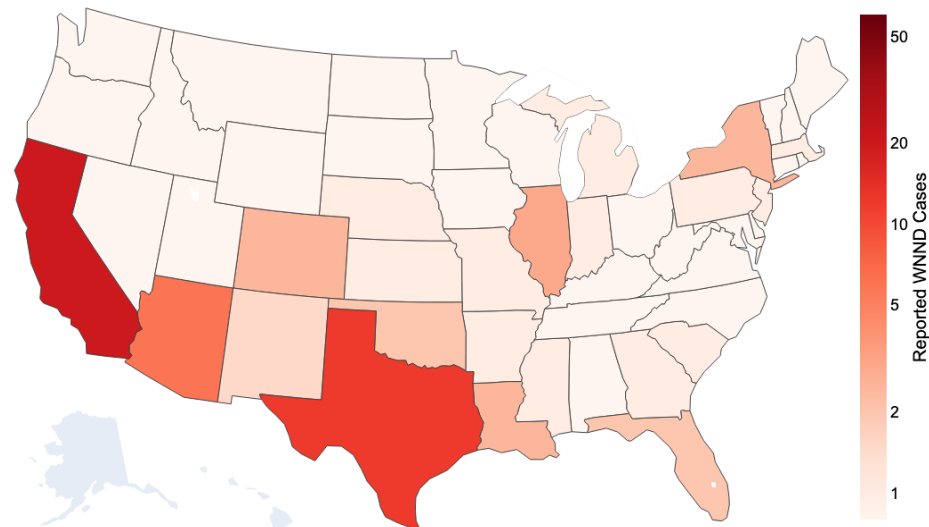

Likelihood of Exceeding Median 10-Year Caseload in October

Likelihood of Exceeding Median 10-Year October Caseload (Ensemble Forecast)

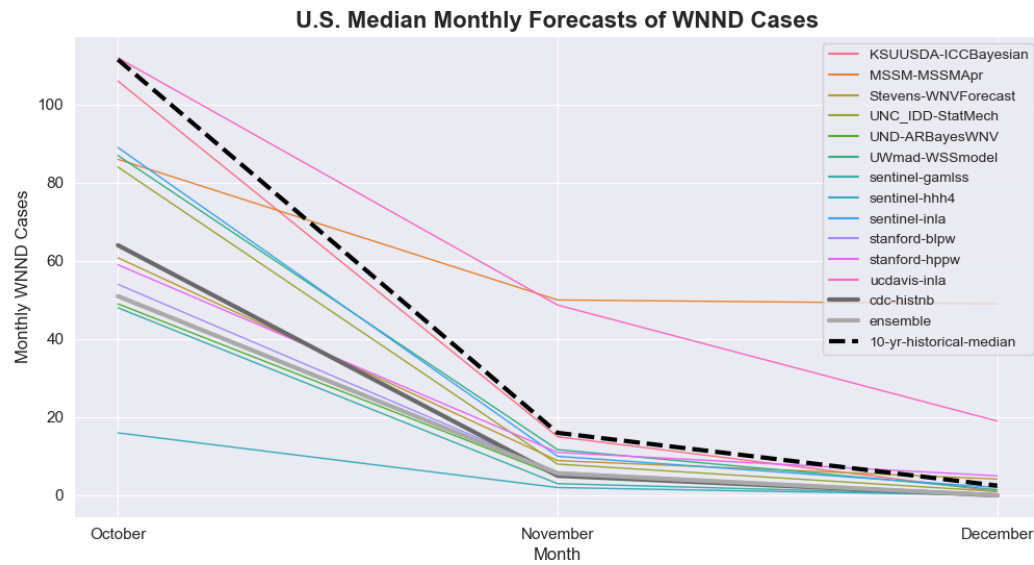

This figure shows the state-specific likelihood of exceeding the median 10-year (2013-2022) reported caseload of West Nile virus neuroinvasive disease.

Median 10-Year October Caseload

This figure shows the state-specific median 10-year (2013-2022) reported caseload of West Nile virus neuroinvasive disease.

National Summary of Median Forecasts

This figure shows model-specific nationwide forecasts across all remaining months. These national summaries were created by adding all state-level median forecasts for each month and do not reflect the uncertainty in each forecast.

Supplemental Table with October Ensemble Forecast

	Ensemble Forecast (percentiles)					10-Year Historical Values		
	5th	25th	50th	75th	95th	minimum	median	maximum
